Answer the questions to check if you can remember everything you learned today!

What causes the Earth to have different seasons throughout the year?

The tilt of the Earth's axis and its revolution around the sun cause the seasons to change.

How does the Earth's rotation affect the length of a day?

What would happen if the Earth stopped rotating?

Why do some places on Earth experience longer days and shorter nights during certain times of the year?

How does the Earth's revolution around the sun affect the length of a year?

Explain how understanding the Earth's rotation and revolution can help in planning agricultural activities.

Describe how knowledge of the Earth's rotation can be useful for navigation and timekeeping.

Add one more example of how what you learned today could be used in the real world
