Tropics

Subtropics

Temperate Zone

Subpolar Zone

Polar Zone

lots of precipitation in summer · foxes · short winter days · Distance from the equator: Adjacent to the tropics · the temperatures are milder · variable precipitation · olive groves · olive trees · pine trees · wet winters · Weather: Constant daylight in summer · Typical animals: Moose ·

Distance from the Equator: Palestine is located in the Northern Hemisphere and lies about 2 · coldest month below 20 degrees Celsius · Vegetation: Deciduous · Weather: Four distinct seasons · lizards · oaks · Vegetation: Coniferous forests in some areas · Weather: Dry summers · Typical animals: Camels · Palestine experiences temperatures ranging from around 0°C in the winter to 40°C in the summer in some regions. In coastal areas · Mediterranean landscapes · which can be much drier. Typical Animals: In Palestine · Weather: Long summer days · Temperatures: Just above freezing in summer · Temperatures: Icy cold winters · oak trees · 800 kilometers north of the equator. Vegetation: Palestine has a diverse range of vegetation · while the inland and desert areas experience more extreme heat in summer. Weather: Palestine has a Mediterranean climate · wolves · you can find trees like pines · Distance from the equator: Farther from the equator · Distance from the equator: Between subtropics and subpolar zones · Typical animals: Deer · very cold in winter · low precipitation in winter · penguins (Antarctica) · and many species of birds like the Palestine sunbird. Reptiles such as lizards and snakes also thrive in the region's varied habitats. · and coastal plains. In these areas · including Mediterranean woodlands · coniferous · Distance from the equator: Closest to the poles · foxes · Vegetation: Deserts · and olive trees · with hot · constant darkness in winter · dry summers and cool · extremely cold in winter · pleasantly warm summers · bears · Typical animals: Polar bears (Arctic) · along with shrubs and wildflowers. Temperatures: Throughout the year · you can find a variety of animals that are typical of the Mediterranean region. Common animals include gazelles · Temperatures: Very hot summers · rainy winters. The coastal areas experience humidity and milder weather compared to the inland areas · scattered showers · and mixed forests · Temperatures: Regularly exceed zero degrees Celsius in summer · Vegetation: Almost no plants · closer to polar zones · low precipitation

Which climate zone do I come from?

Read through the reports of the three children. Then decide: Which climate zone do they each come from? Can you also guess the country? You will find a hint under each text.

Ariadne

Yassou! I'm Ariadne! Here, we have ancient olive trees and beautiful vineyards that make our landscapes so special. In the summer, it gets very hot, which is perfect for swimming in the clear blue waters. You'll often see goats, sheep, and even some wild boars in the countryside. The most rain comes in the winter, which helps our olives and grapes grow strong.

P. S.: My country's name starts with a G.

Lars

Hei! I'm Lars! We have tall pine and spruce forests that cover our mountains and valleys. In the summer, it's cool and mild, perfect for hiking and exploring. You might spot reindeer, elk, and even some lynx if you're lucky. The most rain comes during the fall, making everything fresh and green.

P. S.: My country's name starts with an N.

Sofia

Hola! I'm Sofia! Our land is full of lush rainforests and beautiful savannas. During the summer, it gets really warm and humid, perfect for playing by the river. You can see parrots, jaguars, and capybaras in the wild. The most rain comes in the summer, making our forests even more vibrant and alive.

P. S.: My country's name starts with a P.

Note here for each of the three texts the climate zone (tropics, subtropics, temperate zone, subpolar zone, polar zone) and the country.

Climate Zones of the Earth

In which climate zone do you live? Note down what the weather is like in your area throughout the year, which plants grow there, and which animals live there. Then compare it with the information you were able to gather about the different climate zones.
