Tropics	Subtropics	Temperate Zone	
Subpolar Zone		Polar Zone	

scattered showers · Typical animals: Moose · and coastal plains. In these areas · Weather: Long summer days · which can be much drier. Typical Animals: In Palestine · Distance from the equator: Adjacent to the tropics · 800 kilometers north of the equator. Vegetation: Palestine has

a diverse range of vegetation · Vegetation: Deciduous · foxes · Vegetation: Almost no plants · Distance from the equator: Closest to the poles · Temperatures: Very hot summers · Distance from the Equator: Palestine is located in the Northern Hemisphere and lies about 2 · Weather: Dry summers · Typical animals: Polar bears (Arctic) · Temperatures: Regularly exceed zero degrees Celsius in summer · Typical animals: Deer · olive groves · pine trees · Vegetation: Deserts · low precipitation · constant darkness in winter · wet winters · you can find trees like pines · Typical animals: Camels · low precipitation in winter · penguins (Antarctica) · Weather: Constant daylight in summer · Temperatures: Icy cold winters · the temperatures are milder · rainy winters. The coastal areas experience humidity and milder weather compared to the inland areas · pleasantly warm summers · variable precipitation · closer to polar zones · lizards · very cold in winter · you can find a variety of animals that are typical of the Mediterranean region. Common animals include gazelles · dry summers and cool · Palestine experiences temperatures ranging from around 0°C in the winter to 40°C in the summer in some regions. In coastal areas · olive trees · and mixed forests · oak trees · wolves · Mediterranean landscapes · including Mediterranean woodlands · lots of precipitation in summer · Vegetation: Coniferous forests in some areas · along with shrubs and wildflowers. Temperatures: Throughout the year · coniferous · Temperatures: Just above freezing in summer · short winter days · coldest month below 20 degrees Celsius · bears · and olive trees · Distance from the equator: Farther from the equator · and many species of birds like the Palestine sunbird. Reptiles such as lizards and snakes also thrive in the region's varied habitats. · foxes · oaks · extremely cold in winter · Distance from the equator: Between subtropics and subpolar zones · while the inland and desert areas experience more extreme heat in summer. Weather: Palestine has a Mediterranean climate · with hot · Weather: Four distinct seasons

Climate Zones of the Earth

Name: Date:

Which climate zone do I come from?

Read through the reports of the three children. Then decide: Which climate zone do they each come from? Can you also guess the country? You will find a hint under each text.

Ariadne

Yassou! I'm Ariadne! Here, we have ancient olive trees and beautiful vineyards that make our landscapes so special. In the summer, it gets very hot, which is perfect for swimming in the clear blue waters. You'll often see goats, sheep, and even some wild boars in the countryside. The most rain comes in the winter, which helps our olives and grapes grow strong.

P. S.: My country's name starts with a ${\sf G}$.

Lars

Hei! I'm Lars! We have tall pine and spruce forests that cover our mountains and valleys. In the summer, it's cool and mild, perfect for hiking and exploring. You might spot reindeer, elk, and even some lynx if you're lucky. The most rain comes during the fall, making everything fresh and green.

P. S.: My country's name starts with an N.

Sofía

Hola! I'm Sofía! Our land is full of lush rainforests and beautiful savannas. During the summer, it gets really warm and humid, perfect for playing by the river. You can see parrots, jaguars, and capybaras in the wild. The most rain comes in the summer, making our forests even more vibrant and alive.

P. S.: My country's name starts with a P.

Note here for each of the three texts the climate zone (tropics, subtropics, temperate zone, subpolar zone, polar zone) and the country.

Climate Zones of the Earth

In which climate zone do you live? Note down what the weather is like in your area throughout the year, which plants grow there, and which animals live there. Then compare it with the information you were able to gather about the different climate zones.
